

# Website Accessibility Good Practices followed

1. All the pages have different descriptive titles.
2. Followed the AAA-enhanced contrast ratio through the application.

Type of content	Minimum ratio (AA rating)	Enhanced ratio (AAA rating)
Body text	4.5:1	7:1
Headings	3:1	4.5:1

3. Used the Semantic HTML Tags whenever possible.
4. Used only one `H1` tag per page.
5. Used `tabindex` so that users can go through the content of the webpage through the `TAB` key.
6. Implemented the `eslint-plugin-jsx-a11y` plugin so that we can make sure that our React code follows the `a11y-project` guidelines.
7. Used `aria attributes` to make the UI components screen reader-friendly.
8. Used `aria-live-regions` to update the user about any notification.
